

★ Install & open **Eclipse**.

★ Import existing project :

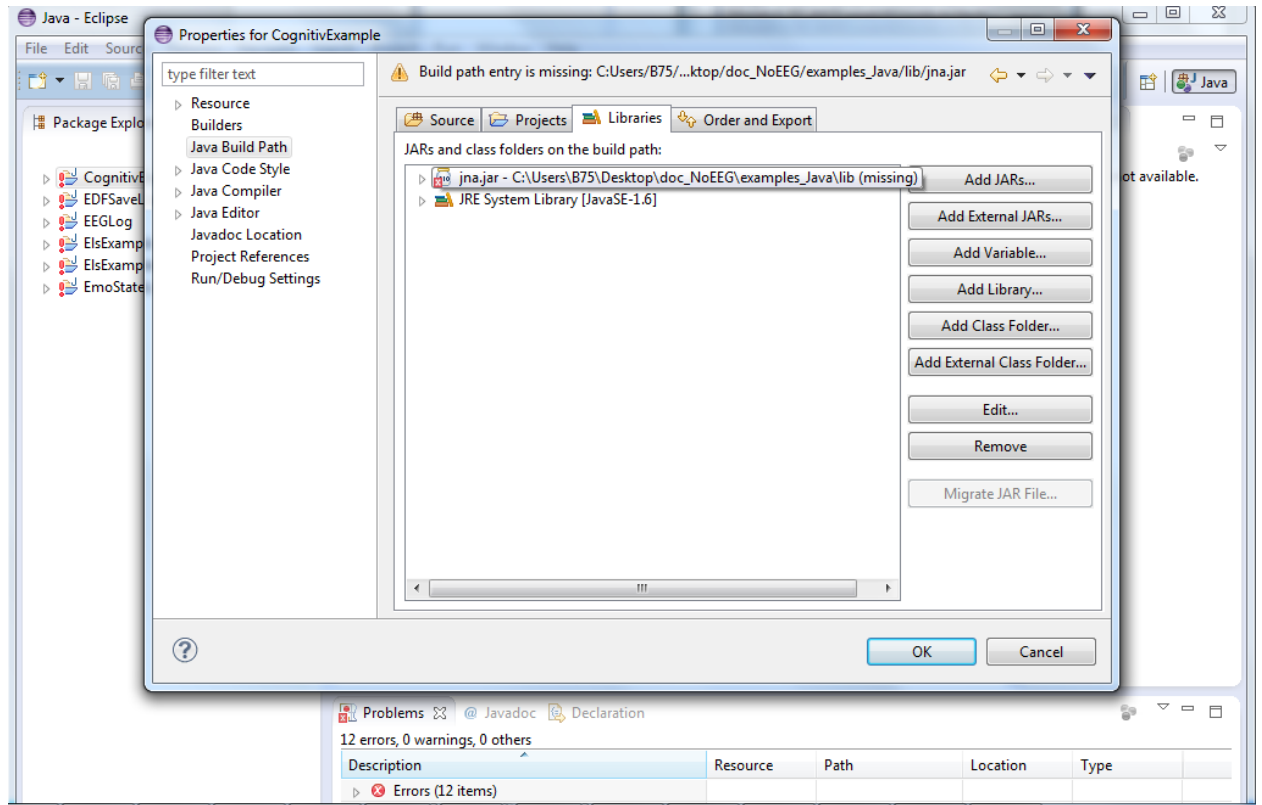

- Open **File** menu/ **Switch Workspace/ Other** , go to directory which you store Java examples.
- On **Package Explorer** panel, right click and choose Import.
- Choose **General -> Existing Projects into Workspace / Next**
- Select root directory, click Browse and go to directory store examples
- Select All or one example for import

- Finish.

★ Link to **jna.jar**:

- Right click on project & choose **Properties**.
- Choose **Java Build Path -> Libraries** tab.
- Select **jna.jar** & **Remove**.
- Click on **Add External JARs** & select file **jna.jar** in folder lib.

- ★ Rebuild project
- ★ Right click on project & choose **Run As / Java Application**
